

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

Did you have (Have you had) any of these illnesses or complications during this pregnancy?

1. Toxemia including all of the following: high blood pressure, albumin (protein) in urine, and swelling of the ankles?

1 No

2 Yes

8 Not Sure

2. High blood pressure without toxemia?

1 No

2 Yes

8 Not Sure

Diagnostic Criteria:

Blood pressure during pregnancy recorded at or above an average of 140 mmHg systolic or 90 on two or more seated blood pressure measured properly with well maintained equipment. There are four subcategories:

1. Chronic hypertension as presence of hypertension before the 20th week of gestation or persistent hypertension for longer than 12 weeks postpartum.
2. Gestational hypertension with hypertension first detected after 20 weeks of gestation without proteinuria.
3. Preeclampsia-eclampsia with new onset of hypertension in a previously normotensive woman accompanied by more than 300 mg proteinuria per 24 hours.
4. Preeclampsia superimposed on underlying hypertension.
