

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

1) Infants (up to 3 years) should be calm, either awake (including quietly seated or quietly playing) or asleep (sleep not associated with any spontaneous movement, including no eye movements or vocalizations). Infants: count breath sounds in a complete respiratory cycle for 60 seconds with a stethoscope gently placed on infant's chest.

Alternatively, with fingers near the radial artery, observe respirations. Observe the rise and fall of the chest. After a complete cycle of inspiration and expiration, count for a full 60 seconds.

2) Record results.
