

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

Summary of the Movement Disorders Society United Parkinson's Disease Rating Scale (MDS-UPDRS)

The Movement Disorder Society United Parkinson's Disease Rating Scale (MDS-UPDRS) is an examiner-administered test that includes four subscales: non-motor experiences of daily living (13 items), motor experiences of daily living (13 items), motor examination (33 scores based on 18 items, several with right, left or other body distribution scores), and motor complications (6 items). Each item is scored on a five point scale: 0 = normal; 1 = slight; 2 = mild; 3 = moderate; and 4 = severe. All items are summed together to give a total score, with higher scores indicating greater disability.

The Movement Disorder Society United Parkinson's Disease Rating Scale (MDS-UPDRS) is a proprietary instrument and administration (with the exception of personal use) requires a license from the [International Parkinson Movement Disorder Society](#).
