

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

The Digit Span Test contains two portions. In the first portion, Digit Span (Forward), the examiner reads the respondent 14 number sequences that range from 3 to 9 digits in length one at a time and then asks the respondent to repeat the sequence in the same order.

In the second portion, Digit Span (Backward), the examiner reads the respondent 14 different number sequences that range from 3 to 8 digits in length one at a time and then asks the respondent to repeat the sequence in reverse order.
