

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

The Behavior Rating Inventory of Executive Function-Preschool® (BRIEF-P®) measures multiple aspects of executive functioning; scales include:

- Inhibit,
- Shift,
- Emotional Control,
- Working Memory, and
- Plan/Organize.

Three broad indexes (Inhibitory Self-Control, Flexibility, and Emergent Metacognition), one composite score, and two validity scales (Inconsistency and Negativity) are provided.

The BRIEF-P® is available in English and in Spanish and is useful when working with individuals who have learning disabilities and attention disorders, depression, traumatic brain injuries, pervasive developmental disorders, lead exposure, and other developmental, psychiatric, neurological, and medical conditions.

The BRIEF-P® is a proprietary instrument and is available online from PAR® at www4.parinc.com. A fee is associated with the BRIEF-P® and is dependent upon various factors, such as if the BRIEF-P® is purchased as a kit (i.e., questionnaires, manuals, and scoring forms) or in individual components.
