

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid investigators to integrate the collection of PhenX measures in your study. The PhenX measures that you selected and added to your Cart are presented in the DCW in alphabetical order. The DCW includes worksheets for data collection. Variables derived from the collected data are shown in the Data Dictionary (DD) with variable names and unique PhenX variable identifiers. The collection of DCWs produced by the Toolkit is not designed as a data collection instrument. Each investigator will decide how to integrate PhenX measures into data collection for their study.

The Behavior Rating Inventory of Executive Function-Preschool® (BRIEF-P®) measures multiple aspects of executive functioning; scales include:

- Inhibit,
- Shift,
- Emotional Control,
- Working Memory, and
- Plan/Organize.

Three broad indexes (Inhibitory Self-Control, Flexibility, and Emergent Metacognition), one composite score, and two validity scales (Inconsistency and Negativity) are provided.

The BRIEF-P® is available in English and in Spanish and is useful when working with individuals who have learning disabilities and attention disorders, depression, traumatic brain injuries, pervasive developmental disorders, lead exposure, and other developmental, psychiatric, neurological, and medical conditions.

The BRIEF-P® is a proprietary instrument and is available online from PAR® at www4.parinc.com. A fee is associated with the BRIEF-P® and is dependent upon various factors, such as if the BRIEF-P® is purchased as a kit (i.e., questionnaires, manuals, and scoring forms) or in individual components.
