

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid investigators to integrate the collection of PhenX measures in your study. The PhenX measures that you selected and added to your Cart are presented in the DCW in alphabetical order. The DCW includes worksheets for data collection. Variables derived from the collected data are shown in the Data Dictionary (DD) with variable names and unique PhenX variable identifiers. The collection of DCWs produced by the Toolkit is not designed as a data collection instrument. Each investigator will decide how to integrate PhenX measures into data collection for their study.

Raven's Progressive Matrices

Raven's Progressive Matrices consist of a visual geometric design with a missing piece. There are five sets of 12 items each for a total of 60 items. The test taker is given from six to eight choices to pick from and fill in the missing piece. There is no time limit. The test produces a single raw score as well as percentile rank to indicate the candidate's educative ability or the ability to think clearly and extract meaning out of events, compared to a norm group.

Raven's Progressive Matrices is a proprietary instrument, and administration requires a licensing agreement from Pearson.
