

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

The Coping Responses Inventory (CRI) for Adults kit includes a manual, item booklets, and answer forms. There are two types of forms—an actual form and an ideal form. The actual form includes questions about the persons actual coping behavior and the ideal form includes questions about preferred coping styles.

The individual is asked to complete the self-report inventory by marking responses on the answer sheet. The responses may be scored via a grid on the attached carbonless paper.
