

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

The Mullen Scales of Early Learning is a proprietary instrument of Pearson and can be obtained through the website below. The instrument is sold as a kit which contains manipulatives and a list of items the examiner will need to furnish. Additionally portions of the kit are sold separately.

An investigator can choose to have an individual take all or some of the subscales without affecting the accuracy of the instrument. Also, there is no standard order in which the subscales have to be administered.

The Mullen Scales of Early Learning can be scored manually or via the Mullen ASSIST™ computer software. The below website, contains information on both scoring methods.

Additionally, per the below website, the use of the Mullen Scales of Early Learning along with the Vineland Social-Emotional Early Childhood Scales to assess all required areas for early childhood evaluation is noted.
