

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

The three milestone variables were computed using smoking calendar data.

Derivation of Cessation Milestones

Three outcome milestones were recorded as defined:

Initial abstinence - Defined as 24 hrs. without smoking. Determined achievement of 24 hrs. of abstinence on the basis of a 24-hr period without any cigarette entries.

Initial lapse - The first episode of any smoking after initial cessation, whether a single puff or multiple cigarettes, recorded by participants.

Relapse - Resumption of regular smoking. Either smoking for 7 consecutive days (7-day relapse) or 5 cigarettes/day for 3 consecutive days (5-3 relapse), computed from entries of smoking episodes.
