

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

To obtain the most recent and past reports that provide the following information, see <http://oas.samhsa.gov/dasis.htm#teds2>.

- Rates of treatment admissions for the U.S. and state level
- Level of care for the U.S. and each state overall
- Demographic subgroups
- Type of service (e.g., Ambulatory outpatient or Intensive outpatient, residential/rehabilitation short-term [<31 days] or long-term [31+ days], hospital, detoxification ambulatory, and free standing residential or hospital based).

For data files available by year and concatenated across years, see <http://oas.samhsa.gov/dasis.htm#teds2>. Online tables will give detailed breakouts. Online or downloaded files can then be used to subset to specific groups (e.g., cannabis users treated in outpatient settings). There are also discharge data sets for a subset of 26 jurisdictions that include the full intake data, plus the length of stay and type of discharge.

For a crosswalk of each state's data system to TEDS, see <http://www.dasis.samhsa.gov/dasis2/crosswalks.htm>.
