

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid investigators to integrate the collection of PhenX measures in your study. The PhenX measures that you selected and added to your Cart are presented in the DCW in alphabetical order. The DCW includes worksheets for data collection. Variables derived from the collected data are shown in the Data Dictionary (DD) with variable names and unique PhenX variable identifiers. The collection of DCWs produced by the Toolkit is not designed as a data collection instrument. Each investigator will decide how to integrate PhenX measures into data collection for their study.

Validated Hemophilia Regimen Treatment Adherence Scale - On-Demand (VERITAS-PRN™)

The Validated Hemophilia Regimen Treatment Adherence Scale - On-Demand (VERITAS-PRN™) is a 24-item, self-administered questionnaire divided into six 4-item subscales: Treat (infusing as recommended), Time (infusing promptly after onset of symptoms), Dose (infusing the proper dose), Plan (planning in order to have supplies on hand), Remember (remembering when and how to infuse) and Communicate (contacting the HTC as appropriate for assistance). Each rating on the 5-point scale has a numeric score; the response indicating the "best" adherence is 1 point, and the response indicating the "worst" adherence is 5 points. Subscale scores range from 4 points (most adherent) to 20 points (least adherent). Total scores range from 24 (most adherent) to 120 (least adherent).

The Validated Hemophilia Regimen Treatment Adherence Scale - On-Demand (VERITAS-PRN™) is a copyrighted instrument. Investigators should contact Natalie A. Duncan at the Indiana Hemophilia and Thrombosis Center to obtain a copy of the scale (see "Source").
